

Andreas is a Computer Science Doctoral Student at Nanyang Technological University in Singapore, supervised by Prof. Mo Li in the Wireless and Networked Distributed Sensing group. His research focuses on resilient wireless communication, from advanced spectrum sensing, interference detection and mitigation to intelligent jamming on the physical and message access control layer. He aims to pair machine learning, signal processing and low-level RTL approaches with state-of-the-art software defined radio platforms to build robust wireless communication systems.

Ruchel Lee | Applied Computing Undergraduate at Singapore Institute of Technology. She is passionate in bringing recognition and equality to females in the Engineering and a Technology space and hope to inspire many others to do the same.

Han LianHua from Singapore Institute of Technology (SIT) is currently pursuing a Degree in Computer Engineering. She is the pioneering President of SWE@SIT and presently serves as SIT Vanguard and SIT Ambassador. Aside from organizing the student chapters, she spends her leisure time actively conducting volunteer work and community activities at her community center to assist arrange events, interact with people with special needs, and collaborate with like-minded people.
